

Safe and Sound Resin Bound gravel is a beautifully decorative outdoor surface, ideal for virtually any size area or installation due to its incredible durability.

It is porous, supporting fast drainage and minimising injury through surface water, and anti-slip. Its resilience to wear and damage make it an ideal alternative to tarmac or concrete.

The Resin Bound range is very versatile, as the aggregate is mixed with a resin and trowelled over a prepared base, allowing for almost any shape to be created, even incorporating logos, making it perfect for schools, businesses and local authorities.

▶ KEY FEATURES

- Porous/fast draining
- Extremely durable
- Excellent resilience to damage and wear
- Very low maintenance
- Can be applied in any shape
- Huge variety of colours
- Weatherproof
- An ideal alternative to tarmac or concrete

▶ COLOURS AVAILABLE

Just a few examples of the types of colours and blends available.

▶ Realistic appearance

Safe and Sound Resin Bound surfacing is blended in a huge range of bright, bold colours and more natural finishes including sand, gravel and basalt. We can create a realistic blend of authentic tones that brings out the best in your facility. Ideal for public walkways, playgrounds, parks and much more.

▶ RESIN BOUND GRAVEL BASE SPECIFICATIONS

Safe and Sound Resin Bound surfacing consists of two layers: a substrate of open-textured macadam (ideally 50mm deep) and a top layer of the Resin Bound gravel.

The surface should be edged with an aluminium trim and an edging kerb. Where new sub-base preparations are required a minimum depth of 150mm MOT type 1 crushed stone is required.

▶ consistent quality

Safe and Sound uses only the best quality materials from a known network of suppliers to ensure consistent colouring, texture and durability.
